

Distribution Shape of Singular Values of ΔW (mean over all 28 transformer layers, all component types)

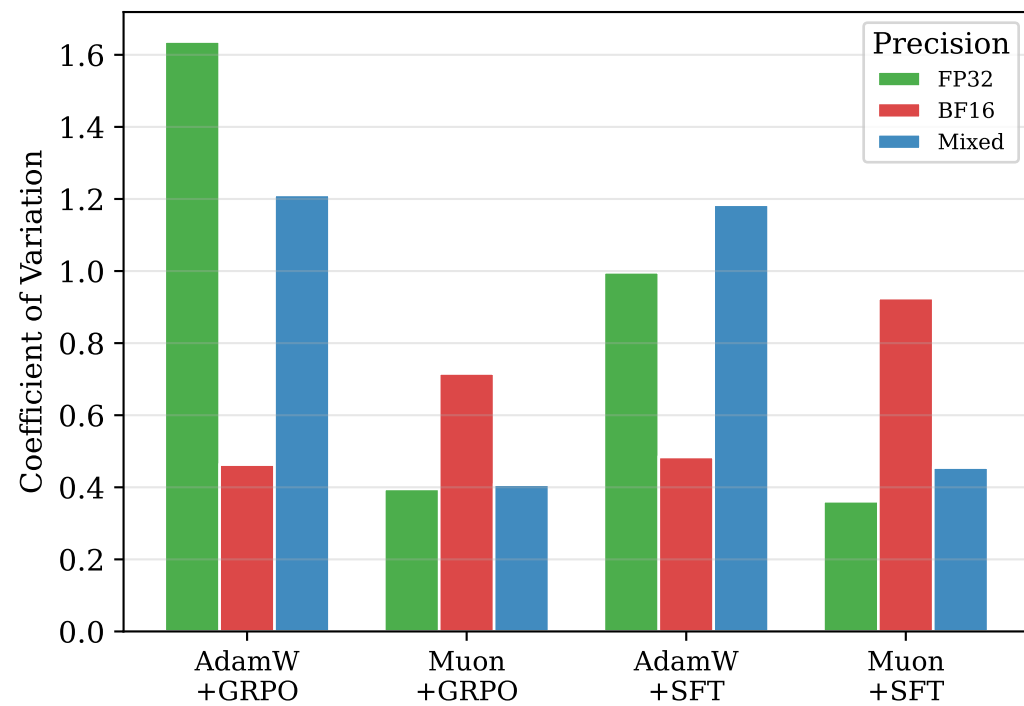

Skewness of SV Distribution
(higher = more right-tailed / top-heavy)

Kurtosis of SV Distribution
(higher = heavier tails)

CV = $\text{std}(\sigma) / \text{mean}(\sigma)$
(higher = more spread out)

Peak-to-Median Ratio: $\sigma_1 / \text{median}(\sigma_i)$
(higher = more concentrated in top SV)
