

## Element-wise vs Spectral Update Sparsity ( $\leq 10^{-5}$ )

Element-wise: % of entries with  $|\Delta W_{ij}| \leq 10^{-5}$   
(following arXiv:2505.11711v2, mean over all 28 layers)

Spectral: % of  $\sigma_i(\Delta W) \leq 10^{-5}$   
(mean over all 28 layers)
